

# 100% Natural Pork Gelatin Protein

## The correct dosage amounts for Step Above Proteins

### **\*\*\*Dog/Cat Consumption\*\*\***

#### How much to feed?

**Collagen Gelatin Protein (CGP)** gives your pet the highest quality life possible.

**An important fact:** A dog should consume 1 gram of protein for every pound of body weight per day. For example, a 40 lb. dog should consume 40 grams to build it's body to it's full potential. 40 grams is equivalent to  $\frac{1}{4}$  of a cup.

**\*\*\*Puppies (Small, Medium, Large, and Giant Breeds)** under 20 lbs or under 4 months old should only take a half dose two times a day. For example, a  $\frac{1}{2}$  tsp for a 0-10 lb. puppy is a normal daily dose. You would then use a  $\frac{1}{4}$  tsp twice a day as your normal daily dose. Once your pet reaches the recommended weight/age, then they can use the normal daily doses listed below.

**\*\*Miniature, and Toy Breeds,** less than 10 lbs. from puppy to adulthood should only take 1 dose amount split twice a day for their whole life. For example, a pet no heavier than 10 lbs, a  $\frac{1}{2}$  tsp is a normal daily dose; therefore you would then use a  $\frac{1}{4}$  tsp twice a day as a normal daily dose for your pet's entire lifetime.

Feed twice daily (2 times a day) morning and evening meals.

tsp = teaspoon

tbsp = tablespoon

## Feeding Recommendations

<u>Pet Weight</u>	<u>Feed twice daily (2 times a day)</u>	
0-10 lbs	.5 tsp	(1/2 tsp)
11-25 lbs	1 tsp	(1 tsp)
26-40 lbs	.5 Tbsp	(1½ tsp)
41-55 lbs	.75 Tbsp	(2¼ tsp)
56-70 lbs	1 Tbsp	(1 tbsp)
71-85 lbs	1.25 Tbsp	(1 tbsp & ¾ tsp)
86-100 lbs	1.50 Tbsp	(1 tbsp & 1½ tsp)
101- 115 lbs	1.75 Tbsp	(1 tbsp & 2¼ tsp)
116 lbs and up	2 Tbsp	(2 tbsp)

\*\*\*Step Above Proteins recommends starting with ½ the regular dosage and working your dog up to the full amount within 1 week. A dog's stomach can be very sensitive and needs time to adjust to changes in their diet. Collagen when started can sometimes cause diarrhea. If this happens cut the amount back by ¼ -½ the amount to let your dog's stomach adjust. Then work their way back to their full amount.

\*\*\*For best results it MUST be taken twice daily (2 times a day)

\*\*Remember, it should NOT be used as meal substitute. It's intended to be used as a protein supplement added to a well balanced diet.

\*\*\*Injury or pre/post surgery dosages can be doubled for faster recovery.

(If your pet has stitches, doubling the dosage is not recommended until they are removed, because skin is healing so quickly and may grow over the stitches)

(Page 1)

## How should it be taken?

Collagen Gelatin Protein (CGP) supplement should be sprinkled over dry food, or mixed into wet food. Make sure dog/cat has plenty of water to drink. You can float food for dogs/puppies. (mix dry food & water in a bowl together) For example; puppies less than six months old should receive 1-2 cups of water with dry food (mixture) per feeding.

## How long will it take before I notice results?

It may take up to 3-4 weeks for you to see positive results. You will notice an increased level of energy, alertness, and readiness to do more as a result of the animal's body feeling better. CGP builds lean muscles and strengthens ligaments, tendons, cartilage, and bones. It is based on good balance of amino acids which creates a unique natural protein for your animal's well being.
